1 Introduction

In academic environments, managing student projects, tasks, meetings, and evaluations can become complex and unorganized. The ESI Git platform was developed to solve this problem by centralizing all academic project management processes into a single web application.

2 Problem Statement

Students and staff face several issues:

- Lack of centralized system for project management
- Poor communication between students, jury, and administrators
- Difficulty in tracking tasks and deadlines
- Unorganized evaluation process

3 Proposed Solution

ESI Git provides a centralized platform that allows:

- Project (Archive) management
- Task tracking using Kanban system
- Meeting scheduling
- Jury evaluation system
- Role-based access (Admin, Student, Jury)

4 Objectives

- Improve academic workflow organization
- Facilitate collaboration between users
- Track progress of projects efficiently
- Automate evaluation and feedback process

5 System Roles

5.1 Admin

- Manage users (students, teachers, jury)
- Manage projects and archives
- Oversee system operations

5.2 Student

- Create and manage projects
- Manage tasks (Kanban board)
- Participate in meetings
- Submit work for evaluation

5.3 Teacher

- Supervise student projects
- Follow project progress
- Provide guidance and feedback
- Validate or review tasks and milestones

5.4 Jury

- Evaluate final student projects
- Provide grading and feedback
- Participate in project defense sessions

6 Features

- User authentication system
- Role-based dashboard
- Project archive system
- Kanban task management
- Meeting scheduling system
- Evaluation module for jury

7 Technologies Used

- Frontend: React.js
- Backend: Django (Python)
- API: REST API
- Database: PostgreSQL

8 System Architecture

The system follows a client-server architecture:

- Frontend handles user interface and interaction
- Backend processes business logic and API requests
- Database stores users, projects, tasks, and evaluations

9 How to Use the Platform

1. Login using credentials
2. Access dashboard based on role
3. Create or manage projects
4. Assign and track tasks
5. Schedule meetings
6. Submit projects for evaluation

10 Conclusion

The ESI Git platform significantly improves academic project management by providing a structured, centralized, and efficient system. It enhances collaboration, organization, and evaluation processes for students and staff.
